

AI Study Planner Report

Student Name: MOKKA RADHIKA

Total Days: 10

Daily Study Hours: 4

Day 1

Today, focus on understanding the core concepts of variables and data types in Python and Java.

Cover the important chapters of variables, data types, and basic operators carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay consistent and believe in your progress because small efforts every day lead to excellent results.

- **Python** - Variables and Data Types (2 hour(s))
- **Java** - Variables and Data Types (1 hour(s))
- **Mathematics** - Algebra (1 hour(s))

Day 2

Today, focus on understanding the core concepts of functions in Python and Java.

Cover the important chapters of functions, function arguments, and return types carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay motivated by tracking your progress and rewarding yourself for achieving daily goals.

- **Python** - Functions (2 hour(s))
- **Java** - Functions (1 hour(s))
- **Reactjs** - Introduction to React (1 hour(s))

Day 3

Today, focus on understanding the core concepts of object-oriented programming in Java and Python.

Cover the important chapters of classes, objects, inheritance, and polymorphism carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay focused by minimizing distractions and creating a conducive learning environment.

- **Java** - OOP Concepts (2 hour(s))
- **Python** - OOP Concepts (1 hour(s))
- **SpringBoot** - Introduction to SpringBoot (1 hour(s))

Day 4

Today, focus on understanding the core concepts of loops in Python and Java.

Cover the important chapters of for loops, while loops, and do-while loops carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay patient and don't be afraid to ask for help when you're stuck on a concept.

- **Python** - Loops (2 hour(s))
- **Java** - Loops (1 hour(s))
- **Oracle** - Introduction to Oracle (1 hour(s))

Day 5

Today, focus on understanding the core concepts of arrays in Java and Python.

Cover the important chapters of array declaration, array initialization, and array operations carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay organized by creating a schedule and sticking to it.

- **Java** - Arrays (2 hour(s))
- **Python** - Arrays (1 hour(s))
- **Mathematics** - Geometry (1 hour(s))

Day 6

Today, focus on understanding the core concepts of strings in Python and Java.

Cover the important chapters of string operations, string methods, and string formatting carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay confident by celebrating your small wins and accomplishments.

- **Python** - Strings (2 hour(s))
- **Java** - Strings (1 hour(s))
- **Reactjs** - React Components (1 hour(s))

Day 7

Today, focus on practicing and reinforcing your understanding of the concepts learned so far.

Cover the important topics of variables, functions, loops, arrays, and strings carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay committed by reminding yourself of your goals and why you started learning in the first place.

- **Python** - Practice Problems (2 hour(s))
- **Java** - Practice Problems (1 hour(s))
- **SpringBoot** - SpringBoot Project (1 hour(s))

Day 8

Today, focus on learning and practicing Oracle database concepts.

Cover the important topics of database design, SQL queries, and database operations carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay curious by exploring new topics and expanding your knowledge beyond the syllabus.

- **Oracle** - Database Design (2 hour(s))
- **Oracle** - SQL Queries (1 hour(s))
- **Mathematics** - Trigonometry (1 hour(s))

Day 9

Today, focus on learning and practicing Reactjs concepts.

Cover the important topics of React components, React state, and React props carefully and make sure you understand each concept clearly.

Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding.

Stay positive by focusing on your strengths and accomplishments.

- **Reactjs** - React Components (2 hour(s))
- **Reactjs** - React State and Props (1 hour(s))
- **Python** - Python Project (1 hour(s))

Day 10

Today, focus on revising and reinforcing your understanding of all the concepts learned throughout the 10 days. Cover all the important topics carefully and make sure you understand each concept clearly. Study actively by taking notes, solving examples, and practicing questions to reinforce your understanding. Stay motivated by reminding yourself of your progress and the benefits of consistent learning.

- **Python** - Revision (1 hour(s))
- **Java** - Revision (1 hour(s))
- **Mathematics** - Revision (1 hour(s))
- **Reactjs** - Revision (1 hour(s))
